# MOON ARTBOARD

## MATERIALS

- CBT058 Pattern Pad
- Texture Stencil 5x8" MS062
- Moon shaped MDF 2 mm
- Transparent acrylic decorations (Christmas trees) or acrylic paper
- Mixed media items: golden/silver glitter gel
- Metallic white golden acrylic color
- Paper glue, gel medium mat transparent
- Toppings, glitters, decorations
- Glossy accent

1

As a base use a MDF artboard moon shaped. If you don't have it, cut manually a moon from a cardboard 2 mm thickness. Color the moon edges with a white metallic acrylic color (white golden, silver, or metallic white). Cut two paper moon's layouts using a neutral paper.

2

With the distresser do the edges of the moon profile, which are a bit ripped. This tool can be substitute with scissors.

3

Using the stencil Texture stencil 5x8" Mistletoe MS062 and a silver glitter gel decorate the Moon profile (only one of them, the second one will be used to embellish the rear part of the artboard).

4

Decorate the Moon. Cut a lot of elements from the paper, especially trees. I used transparent acrylic trees. The edges don't have to be very smooth; they'll be covered with glitter gel. You can cover the other little items with the glossy accent which will provide a glass effect.

5

Start the decoration, first paste the trees (from the bigger to the smaller, mixing paper and acrylic trees).

6

Paste the wings on the child's back. Paste the little girl on the Moon then glue all the other characters and the written "Dreamland". Paste the acrylic stars on them. If you don't have them, you'll find a lot of stars in the Dreamland Collection that you can use covered with glossy or glitter. Paste glitters and the toppings by choosing (use the medium transparent mat gel).
